

SAMI Team
Guidelines for Non-Responders to Treatment

In an effort to engage clients who are non-responders to treatment the following shall apply:

- Based on the stage, each clinician will determine client's level of readiness for treatment
- Establish team-based stage of treatment
- Each non-responder to treatment will be discussed in individual and group supervision and/or team meetings to determine strategies for assertive outreach including:
 - Modifying treatment interventions (adding DBT, IMR, Rape Crisis, Addiction Svcs, etc.)
 - Client phone calls and home visit attempts
 - Contacts with family and emergency contact (if authorized and applicable)
- Clinicians will utilize the standard progress note to reflect efforts of outreach or modifications to treatment
- Consultation with the Psychiatrist (if applicable) and Clinical Coordinator to determine risk management plan for client based on level of engagement in treatment
